

Tempest Delivers MVU to DFW Airport!

In July 2004, Dallas Ft. Worth Airport took delivery of their first Tempest Mobile Ventilation Unit. It is a 60" diameter model mounted on a Peterbilt 330 chassis. The DFW MVU features a scissor lift that can elevate the fan up to 20 feet above the ground, a misting system for mass decontamination, and a 360 degree rotation system. The unit is completely self-

contained and is powered by a 130hp Cummins diesel engine. DFW Airport will be using their MVU for emergency ventilation of passenger terminals, aircraft, tunnels and other large structures at the airport facility. For more information please contact Tempest Customer Service at 800-346-2143.

Accessories for Tempest Direct-Drive Power Blowers

Misting Ring - Made of all stainless steel construction, with high pressure brass fittings, our Misting Ring will operate on street pressure, or up to 100 psi from a pump. Attaching to 16" blower grills, or larger, the use of a misting ring can substantially lower air temperature by 30 degrees Fahrenheit in hostile interior environments.

Blower Exhaust Extension— Our Blower

Exhaust Extension reduces and eliminates chances of Carbon Monoxide contamination. Available in a 2" x 10" size, you can easily combine two of them together to achieve a 20' extension. Made of durable high heat resistant polyethylene for increased user safety.

Quick Release Hold Downs— Use these to securely mount blowers on emergency vehicles or in compartments. The positive latch releases quickly and is designed to work with all Tempest Blowers.

Blower Covers -Designed to protect blowers when in storage or secured on emergency apparatus. Made of durable vinyl material ensuring a long life they also feature metal grommets along the bottom for securing with a bungee cord. Sizes to fit all Tempest Blowers.
